INFORMED CONSENT FORM

Breast Implant Removal (Explantation)

This draft supports, but does not replace, an in-person discussion with the surgeon. Do not sign until the individualized procedure plan and risks have been completed.

PATIENT AND PROCEDURE DETAILS

Full name: _____

Date of birth: _____

Patient / file number: _____

Counseling date: _____

Facility / place of surgery: _____

Proposed procedure, side and area: _____

Procedure overview

This procedure removes existing breast implants. Whether the surrounding capsule is retained, partially removed or completely removed depends on medical indications and safety. Simultaneous lift may not be appropriate in all patients.

Purpose and potential benefits

It aims to remove the device and evaluate associated problems; relief of pain or systemic symptoms is not guaranteed.

Alternatives

Observation, replacement in selected patients, limited capsule procedures; investigation of suspicious masses or fluid collections.

Procedure-specific risks

Bleeding, infection, seroma, breast deflation or shape changes, asymmetry, altered sensation, skin loss, scars, rarely injury to the chest wall or pleura; capsular surgery adds risks, and incomplete removal or another operation may be necessary. En-bloc removal is not indicated or safe for every patient.

Postoperative care

Follow wound and drain instructions. Sudden breathlessness, severe chest pain or worsening swelling need emergency care.

Questions for your surgeon

How much capsule will be removed, and why? Are pathology or implant tests planned?

General surgical and anesthesia risks

Any operation can involve bleeding, hematoma, infection, delayed healing, wound separation, scarring, pain, numbness, swelling, allergy or medication reactions, venous blood clots (DVT or pulmonary embolism), anesthesia-related complications and, rarely, life-threatening events. Individual risks vary with health status

and procedure.

Personal factors affecting risk

Tell the surgeon about smoking/nicotine use, diabetes, high blood pressure, cardiac or lung conditions, previous operations, bleeding or clotting disorders, poor wound healing, possible pregnancy, prescribed medicines, hormones, supplements and allergies. Do not stop prescribed medications without medical advice.

Expectations, additional treatment and costs

Cosmetic outcomes are personal and subjective. Asymmetry, persistent scars, dissatisfaction or unexpected healing may require additional care or revision. Timing, feasibility, likely benefit and potential additional costs of revision must be discussed separately.

Recovery and warning signs

Attend follow-up appointments. Seek prompt care for fever, worsening redness, pus, increasing bleeding, uncontrolled pain, sudden shortness of breath, chest pain or new swelling of one leg. Procedure-specific emergency warning signs are described above.

Alternatives and right to decline

You may decline the proposed operation, obtain a second opinion and withdraw consent before the intervention begins. Declining elective cosmetic surgery usually means retaining the current appearance; functional concerns should be assessed separately.

Photographs and privacy

Clinical photographs and medical records needed for care must be handled under applicable health-data confidentiality rules. Educational, social media, advertising or other public use is NOT authorized by this surgical consent and requires separate explicit permission.

INDIVIDUALIZED PLAN AND RISK NOTES (TO BE COMPLETED BY SURGEON)

Incisions, technique, side and additional procedures: _____

_____

Relevant conditions / risks / allergies / medications: _____

_____

Anesthesia and estimated duration: _____

_____

PATIENT COUNSELING AND DECISION RECORD

The purpose, technique, reasonable alternatives, consequences of declining surgery, significant risks, expected recovery and emergency warning signs were explained to me in a language I understand. I could ask questions and seek another opinion. I understand that outcomes are not guaranteed and additional care or revision may be needed. I know I can withdraw my consent before the procedure begins.

[ ] I consent to the procedure individualized and explained above.

[ ] I decline the proposed procedure / defer my decision.
