INFORMED CONSENT FORM

Eyelid Surgery (Blepharoplasty)

This draft supports, but does not replace, an in-person discussion with the surgeon. Do not sign until the individualized procedure plan and risks have been completed.

PATIENT AND PROCEDURE DETAILS

Full name: _____

Date of birth: _____

Patient / file number: _____

Counseling date: _____

Facility / place of surgery: _____

Proposed procedure, side and area: _____

Procedure overview

Blepharoplasty reshapes skin, fat and occasionally muscle in the upper and/or lower eyelids. Access may be through the upper lid crease, below the lashes, or inside the lower lid. Dry eye, ocular disease, eyelid position and visual symptoms require individual preoperative assessment.

Purpose and potential benefits

The goal is improved eyelid appearance and, when appropriate, reduction of upper-lid skin excess. Dark circles, fine lines and eyelid asymmetry may not be completely corrected.

Alternatives

No surgery; additional eye assessment when visual or ocular symptoms are present; non-surgical options for selected superficial concerns.

Procedure-specific risks

Possible risks include dry, irritated or watery eyes, blurred vision, light sensitivity, incomplete eyelid closure (lagophthalmos), downward displacement or outward turning of the lower lid (retraction/ectropion), asymmetry, scarring, uneven fat contour, temporary double vision, infection, bleeding and revision. Rare severe bleeding around the eye may threaten vision and needs emergency care.

Postoperative care

Use prescribed drops, ointment and cold compresses; avoid eye rubbing. Sudden loss of vision, severe eye pain, rapidly increasing swelling or significant changes in vision require immediate emergency assessment.

Questions for your surgeon

Are upper, lower or both lids planned? Does my dry eye change the surgical choice? Is an additional lid-support procedure needed?

General surgical and anesthesia risks

Any operation can involve bleeding, hematoma, infection, delayed healing, wound separation, scarring, pain, numbness, swelling, allergy or medication reactions, venous blood clots (DVT or pulmonary embolism), anesthesia-related complications and, rarely, life-threatening events. Individual risks vary with health status and procedure.

Personal factors affecting risk

Tell the surgeon about smoking/nicotine use, diabetes, high blood pressure, cardiac or lung conditions, previous operations, bleeding or clotting disorders, poor wound healing, possible pregnancy, prescribed medicines, hormones, supplements and allergies. Do not stop prescribed medications without medical advice.

Expectations, additional treatment and costs

Cosmetic outcomes are personal and subjective. Asymmetry, persistent scars, dissatisfaction or unexpected healing may require additional care or revision. Timing, feasibility, likely benefit and potential additional costs of revision must be discussed separately.

Recovery and warning signs

Attend follow-up appointments. Seek prompt care for fever, worsening redness, pus, increasing bleeding, uncontrolled pain, sudden shortness of breath, chest pain or new swelling of one leg. Procedure-specific emergency warning signs are described above.

Alternatives and right to decline

You may decline the proposed operation, obtain a second opinion and withdraw consent before the intervention begins. Declining elective cosmetic surgery usually means retaining the current appearance; functional concerns should be assessed separately.

Photographs and privacy

Clinical photographs and medical records needed for care must be handled under applicable health-data confidentiality rules. Educational, social media, advertising or other public use is NOT authorized by this surgical consent and requires separate explicit permission.

INDIVIDUALIZED PLAN AND RISK NOTES (TO BE COMPLETED BY SURGEON)

Incisions, technique, side and additional procedures: _____

_____

Relevant conditions / risks / allergies / medications: _____

_____

Anesthesia and estimated duration: _____

_____

PATIENT COUNSELING AND DECISION RECORD

The purpose, technique, reasonable alternatives, consequences of declining surgery, significant risks, expected recovery and emergency warning signs were explained to me in a language I understand. I could

ask questions and seek another opinion. I understand that outcomes are not guaranteed and additional care or revision may be needed. I know I can withdraw my consent before the procedure begins.

[ ] I consent to the procedure individualized and explained above.

[ ] I decline the proposed procedure / defer my decision.
